7. $499 + 597 = 1,096$. $1 + 0 + 9 + 6 = 16$.

17. 9 is the maximum number of regions that can be enclosed by two overlapping rectangles, as shown below.

18. $8, \frac{8}{3}, \frac{8}{9}, \frac{8}{27}, \dots$ is the only geometric sequence. It has a common ratio of $\frac{1}{3}$.

20. To find the sum of the supplement and complement of an angle, subtract twice the angle measure from 270. We are asked to find the sum of the supplement and complement of an angle measuring 63.24° . Following our rule, $270 - 2(63.24) = 270 - 126.48 = 143.52^\circ$.

21. First assign l (length) = 40 mm, w (width) = 20 cm and h (height) = 16 cm. Now, change 40 mm to 4 cm. The volume of a rectangular prism is $V = lwh$. Substituting into the formula and $V = lwh = 4(20)(16) = 1,280 \text{ cm}^3$.

23. 3,999 is the largest number that can be written in Roman numerals without using an overline bar.

29. The parent function of all quadratic functions is $f(x) = x^2$ or $y = x^2$.

31. If 60% of Lilly's friends like chocolate ice-cream and 48% like both chocolate ice-cream and strawberry ice-cream, then $\frac{48}{60} = \frac{4}{5} = 0.8 = 80\%$ of her friends that like chocolate ice-cream also like strawberry ice-cream.

33. If x = Jamie's age, then we have $(x + 6)(x - 6) = 288$. Multiply this out and $(x - 6)(x + 6) = x^2 - 36 = 288$. Add 36 to both sides and $x^2 = 324$. Square root both sides and Jamie is 18 years old.

41. Given $-3 \left| \frac{4-m}{3} \right| + 2 = 8$, first, subtract 2 from both sides and get $-3 \left| \frac{4-m}{3} \right| = 6$. Now, divide both sides by -3 and get $\left| \frac{4-m}{3} \right| = -2$. The answer is then "no solution" because the absolute value of any value cannot be equal to a negative number.

45. Because the triangle is an equilateral triangle, the central angles are all 120° .

The ratio of an isosceles triangle with an included angle of 120° is as follows.

We are given that the triangle has a side length of 12 inches, so we make the equation $12 = x\sqrt{3}$. We divide by $\sqrt{3}$ and then get $\frac{12}{\sqrt{3}} = x$. Rationalize the denominator by multiplying

by $\frac{\sqrt{3}}{\sqrt{3}}$ and we get $x = \frac{12}{\sqrt{3}} \cdot \frac{\sqrt{3}}{\sqrt{3}} = \frac{12\sqrt{3}}{3} = 4\sqrt{3}$. This value is also the radius of the circle. Double the radius to find the diameter, and thus, $2(4\sqrt{3}) = 8\sqrt{3}$ inches.

46. $24.5 + 13.5 = 38$. 20% of $38 = 0.2(38) = 7.6$. $38 - 7.6 = 30.4$. 5% of $30.4 = 1.52$. $30.4 + 1.52 = 31.92$. Shelby's total bill will be \$31.92.
