6. Make the proportion $\frac{9}{1.50} = \frac{x}{12.50}$. Cross multiply and get $9(12.5) = 1.5x$. This simplifies to $112.5 = 1.5x$. Divide both sides by 1.5 and $x = \frac{112.5}{1.5} = 75$. Tonya received 75 tokens for \$12.50.

13. On a standard die, opposite faces sum to 7. Josh rolls three dice and a 3, 2, and 6 are facing up. This means a 4, 5 and 1 are facing down, and $4 + 5 + 1 = 10$.

21. The inter-quartile range is the difference of the upper quartile minus the lower quartile. We are given the set of numbers 107, 67, 85, 72, 73, 91 and 73. From least to greatest, the list is 67, 72, 73, 73, 85, 91, and 107. The median is 73. The lower quartile is 72 and the upper quartile is 91. The inter-quartile range is then $91 - 72 = 19$.

28. If $A = 3.4 \times 10^6$ and $B = 4.5 \times 10^3$, then $AB = (3,400,000)(4,500) = 15300000000$. Therefore, AB will end in 8 zeros.

29. Slope-intercept form of a linear equation is $y = mx + b$. We are given the equation $2x - 11y = 44$, so we must solve for y . First, subtract $2x$ from both sides and get $-11y = -2x + 44$. Now divide both sides by -11 and get $y = \frac{2}{11}x - 4$.

33. There are 360° in a circle.

So, the measure of $\angle EDC$ is equal to $360 - 90 - 60 - 60 = 150^\circ$.

38. $(2 + \sqrt{3})(2 - \sqrt{3}) = 2(2) - 2\sqrt{3} + 2\sqrt{3} - (\sqrt{3})(\sqrt{3}) = 4 - 3 = 1$.

40. $24 \times 34 = 816$ square feet of wall that needs to be painted. A gallon of paint covers 250 square feet, so $816 \div 250 = 3.264$. Since the amount is more than 3, 4 gallons of paint are needed. The cost of 4 gallons of paint will be $4(37.5) = \$150.00$.

42. Using $4^1 = 4, 4^2 = 16, 4^3 = 64, 4^4 = 256$ and so on, we see that any power of 4 end in the unit's digit being a 4 or 6. We also see every positive odd integer, n , of 4^n ends in a 4 and every positive even integer, n , ends in a 6. Since 10 is an even number, 4^{10} will end in a 6.

48. There are a total of $4 \times 4 \times 4 = 64$ $1 \text{ cm} \times 1 \text{ cm} \times 1 \text{ cm}$ cubes used. The 8 corners are not painted. This leaves $64 - 8 = 56$ cubes remaining. There are $2 \times 2 \times 2 = 8$ interior cubes that have no faces painted. This leaves $56 - 8 = 48$ cubes remaining. There are 24 cubes that have one face painted. This leaves $48 - 24 = 24$ cubes. So, there are exactly 24 cubes with two of their faces painted, which is $\frac{24}{64} = \frac{3}{8} = 0.375 = 37.5\%$.

50. A square with an area of 200 cm^2 has a side length of $\sqrt{200} = 10\sqrt{2} \text{ cm}$. Substitute $10\sqrt{2}$ into the formula for area of a regular octagon as the side length a , and $A = 2a^2(1 + \sqrt{2}) = 2(10\sqrt{2})^2(1 + \sqrt{2}) = 2(200)(1 + \sqrt{2}) = 400(1 + \sqrt{2}) = 400 + 400\sqrt{2}$. The area of the regular octagon is then $400\sqrt{2} + 400 \text{ cm}^2$.
